PHOSPHATE fertilizers

With our component

phosphorus is absorbed better

50% or more

Dear Ladies and Gentlemen!

TM Agri Dives offers a component for phosphate fertilizers based on polysilicic acid and vanadium.

By using our component you get more efficiency

- Due to these two elements, **plants assimilate phosphorus quickly and easily.**
- Vanadium causes complex **phosphorus chains decompose almost instantly.**
They break down into **assimilable compounds.**
- It becomes possible to **reduce the rate of application** of phosphorus fertilizers **by two times at least**, which saves your money significantly.
